INSTITUTE OF ENGINEERING & MANAGEMENT (IEM)
Salt Lake, Kolkata
Department of Computer Science & Engineering

PCCCS504 | Software Engineering and Project Management | Semester V | L:T:P:S – 3:0:3:0

SOFTWARE REQUIREMENTS SPECIFICATION

Lab 3 – Requirements Engineering | Assignment 3 | IEEE 830 structure

Student / Team Details

Team No.: _____ **Team Name:** 404 Brain Not Found

Team Members

S.No	Student Name	Roll No.	Assigned Role
1	Debarghya Mitra	248	Project Manager
2	Arka Ghosh Dastider	220	UI/UX Designer
3	Jitesh Jana	243	Quality Assurance (QA) Engineer
4	Jatin Kumar	232	Software Architect
5	Diptomoy Das	227	Full-Stack Engineer

Section: C **Batch:** 2024 - 2028 **Semester / AY:** 5th Semester 3rd Year

Faculty In-Charge: Sangeeta Sarkar, Sadhu Prasad Kar **Date:** 21.08.2026

Purpose of This Document

This document lists everything your system must do. It is used again in Lab 4 (UML), Lab 6 (testing), and Lab 7 (final evaluation), so fill it in carefully.

Follow the structure below in order. You need at least 5 Functional Requirements and 3 Non-Functional Requirements. Each one should be clear and testable — avoid vague lines like 'the system should be fast'.

1. Introduction

1.1 Purpose

Purpose of this document
• The purpose of this Software Requirements Specification (SRS) is to define the functional and non-functional requirements of the **IEM Admission System**.
• It describes the expected system behavior, user interactions, constraints, assumptions, and quality requirements that will guide the design, development, and testing of the system.

1.2 Scope

Scope of the product being specified
• The IEM Admission System is a web-based platform designed to simplify and manage student admission processes.
• It enables applicants to register, submit applications, upload required documents, pay application fees, and track their admission status, while allowing administrators to manage applications and the overall admission process.

1.3 Definitions, Acronyms & Abbreviations

Term	Definition
IEM	Institute of Engineering & Management
SRS	Software Requirements Specification
FR	Functional Requirement
NFR	Non-Functional Requirement
UAT	User Acceptance Testing
Applicant	A student applying for admission through the system
Administrator	An authorized user responsible for managing admission activities
Application	Admission information submitted by an applicant
Document Verification	The process of checking documents submitted by an applicant

1.4 References

References (textbooks, standards, tools used)

1.5 Overview

Overview of the rest of this document
• This document defines the requirements of the IEM Admission System. It describes the overall product, users, constraints, assumptions, functional requirements, non-functional requirements, and supporting information required for subsequent system design and testing.

2. Overall Description

2.1 Product Perspective

Product Perspective
• The **IEM Admission System** is a web-based application developed to support and streamline the student admission process at the Institute of Engineering & Management. It provides a centralized platform where applicants can register, submit admission applications, upload required documents, pay application fees, and track their admission status.
• The system also provides administrative functionality for managing applications, verifying submitted documents, and monitoring the admission workflow. It is intended to provide a structured digital alternative to manual admission activities and improve the overall efficiency of the process.

2.2 Product Functions

Note: A short list of the main functions. The full detailed list goes in Section 3.

Product Functions (summary)
• **Applicant Management:** The system shall allow applicants to register, submit admission applications, upload required documents, and pay application fees.
• **Application Tracking:** The system shall allow applicants to view and track the current status of their admission applications.
• **Administrative Management:** The system shall allow administrators to manage applications, verify submitted documents, and update application status.

2.3 User Characteristics

User Characteristics
• **Applicants:** Students who will use the system to register, submit admission applications, upload documents, pay application fees, and track their application status. They are expected to have basic knowledge of computers and web applications.
• **Administrators** will have authorized access to manage applications, verify submitted documents, and update application status. They are expected to have sufficient knowledge of the admission process and the administrative functions provided by the system.

2.4 Constraints

Constraints
• The system shall be developed within the **approved project timeline and scope**.
• The system shall comply with **applicable institutional guidelines and requirements**.
• The use of external tools or services shall depend on their **availability and project resources**.

2.5 Assumptions and Dependencies

Assumptions and Dependencies
• **Assumptions:** The project requirements will remain reasonably stable, required development tools and resources will be available, and team members will complete their assigned tasks as planned.
• **User Feedback:** It is assumed that users will provide timely feedback during testing and User Acceptance Testing (UAT).
• **Dependencies:** The system may depend on the availability of required external tools or services, particularly those used for application fee payment and system deployment.

3. Functional Requirements

Note: Minimum 5 required. Each row should describe ONE thing the system must do, written so it can be tested later ('the system shall…').

FR ID	Description	Priority (H/M/L)
FR-1		
FR-1	The system shall allow applicants to register by providing the required personal and contact information.	H
FR-2	The system shall allow registered applicants to complete and submit their admission applications.	H
FR-3	The system shall allow applicants to upload the required documents and submit the application fee.	H
FR-4	The system shall allow applicants to view and track the current status of their submitted applications.	H
FR-5	The system shall allow authorized administrators to manage submitted applications, verify documents, and update application status.	H

4. Non-Functional Requirements

Note: Minimum 3 required. Cover things like Performance, Security, or Usability, each with a measurable target where possible.

NFR ID	Category	Description
NFR-1	Performance	The system shall respond to normal user requests within **3 seconds** under the expected project workload, excluding delays caused by external services.
NFR-2	Security	The system shall ensure that applicant information and application records can only be accessed by **authorized users**.
NFR-3	Usability	The system shall provide a **clear and easy-to-use interface** that allows applicants to complete the admission process with minimal assistance.

5. Interface Requirements

ID	Interface Type	Description
IR-1	User Interface	The system shall provide separate login interfaces for applicants and authorized administrators.
IR-2	User Interface	The system shall provide an application interface for applicants to enter and submit admission details.
IR-3	User Interface	The system shall provide a document upload interface for applicants to submit the required admission documents.
IR-4	Payment Interface	The system shall provide a payment interface for applicants to pay the admission application fee.
IR-5	Administrative Interface	The system shall provide an administrative interface to manage applications, verify documents, and update admission status.
